

# ORGANIC SOILS

## SUNSHINE ORGANIC POTTING SOIL

This is OMRI listed potting soil. (Organic Materials Review Institute...They certify products for use in commercial organic farming). This soil does have some turkey manure in it for nutrient so it is not suitable for those seeking to avoid all animal products. To boost this soil for heavy feeding plants, use mushroom compost, manure, or worm castings. Because of its light texture, this soil is better for houseplants than heavier soils like Ocean Forest. This soil is also good for seedlings and seed starting as well as raised beds, but it will need some amendments for nutrition.

## FOX FARM ORIGINAL PLANTING MIX

Fox Farm Original Planting Mix is a concentrated mixture of organic and mineral components based around select worm castings and bat guano. One of the finest planting media for lush flower and vegetable gardens, Fox Farm Original is ready to use right out of the bag. It is an exceptional mix for raised bed plantings and for amending existing garden beds. Fox Farm Original will not burn even the most delicate plantings.

## FOX FARM OCEAN FOREST

When it comes to purchasing an organic soil mix that is ready to use, Ocean Forest is exactly what you are looking for. It is comprised of forest humus and sphagnum peat moss. Mixed into this base are: perlite for aeration; fish, shrimp, crab meal; composted manure; as well as bat guano and kelp meal. Fox Farm also adds crushed oyster shell for lime to balance the pH. The pH in the bag is around 6.3 which, for most plants, is within the desirable range. Ocean Forest potting soil is perfect for container gardens and amending your outside garden. Remember this soil is full of nutrient (hot soil), so it is NOT suitable for starting seeds or baby seedlings, or for light feeding houseplants.
