

SOILESS GROWING MIXES

PROMIX BX

Pro-Mix BX is a "general purpose" peat-based growing medium with vermiculite and perlite, used for the cultivation of a wide variety of plant species. It contains Canadian Sphagnum Peat Moss, perlite, vermiculite, dolomitic lime, a wetting agent, and endoymycorrhize (Mycorise® Pro), ensuring stronger, healthier plants due to more developed root systems and better fertilizer uptake. Pro-Mix is good for seed planting, containers, and raised beds, and is also a great base for making your own potting soil. We recommend adding a 40 lb. bag of manure, and a 50 lb. bag of Worm Earth worm castings to each bail. A bag of mushroom compost could be substituted for the manure. Many people will add perlite to increase drainage. Our own potting soil mix for a 5 gallon bucket is 1-2 cups vermicompost, ½ to 1 gallon mushroom compost or manure, and 4 gallons of Pro-Mix. (optional: ½ to 1 gallon extra perlite) We recommend additional manure and worm castings for heavy feeding plants like tomatoes.

METRO MIX

Metro Mix is a soilless medium that contains peat, vermiculite, bark, bark ash, starter nutrient with slow release nitrogen, and dolomitic lime. This product is similar to Pro-Mix, but without perlite, and with a synthetic starter nutrient. It may be blended with any of our amendments for increased nutrient content, and perlite may be added for increased drainage.
